6.6 Calendar on Android

Android does not include one CalDAV setup path on every device. Install a trusted CalDAV sync adapter, such as DAVx[5], and use it to add the LightDrive account.

- **Base URL:** `https://vault.lightdrive.one/remote.php/dav/`
- **Username:** your full LightDrive email address
- **Password:** a LightDrive client password that includes **Calendars** (recommended)

For third-party Calendar clients, a separately revocable LightDrive client password that includes Calendars is recommended. Your main LightDrive password or a Vault app password may also work with compatible Calendar clients.

Select the LightDrive calendars in the sync adapter, enable calendar synchronization, and allow the permissions and background activity it needs. The calendars then appear in Android calendar apps that use the system calendar provider.

Choosing services for Android

Use a separate Email-only password for your mail app and a Contacts & calendars password for your DAV sync adapter, or deliberately choose a combined password for all three. See Calendar Synchronization for creating one. Contacts and Calendar have different server addresses and may need separate accounts in the adapter. Select the address books and calendars you want to sync. Sharing permissions still apply on the phone.
