

## 6.6 Calendar on Android

Android does not include one CalDAV setup path on every device. Install a trusted CalDAV sync adapter, such as DAVx<sup>5</sup>, and use it to add the LightDrive account.

- **Base URL:** <https://vault.lightdrive.one/remote.php/dav/>
- **Username:** your full LightDrive email address
- **Password:** a client password with **Calendars** access

Select the LightDrive calendars in the sync adapter, enable calendar synchronization, and allow the permissions and background activity it needs. The calendars then appear in Android calendar apps that use the system calendar provider.

### Choosing services for Android

---

Use a separate Email-only password for your mail app and a Contacts & calendars password for your DAV sync adapter, or deliberately choose a combined password for all three. See [Calendar Synchronization](#) for creating one. Contacts and Calendar have different server addresses and may need separate accounts in the adapter. Select the address books and calendars you want to sync. Sharing permissions still apply on the phone.
