

3.3 Changing Your Password

Open **Settings** → **Security** and use the password section to change your main LightDrive password.

1. Enter your current password.
2. Enter and confirm a new, unique password.
3. Save the change.

The new password applies to the Vault. Update a Files or Calendar client if it deliberately stores the main password.

Connected-app credentials

Vault app passwords, Email client passwords, and Contacts-only client passwords are separate credentials. Changing the main password does not change them.

- Review Vault app passwords and Email client passwords under **Settings** → **Security** → **App & device access**.
- Review Contacts-only client passwords under **Contacts** → **Mobile & app connections**.

An Email & contacts password can authenticate to IMAP, SMTP, and CardDAV. Email-only and Contacts-only passwords stay limited to their named service. The main password authenticates to none of those protocols. Revoke credentials you no longer use.

If you forgot the password

Use **Forgot password?** on the sign-in page. LightDrive sends recovery instructions to the verified recovery email address.
