

7.6 Contacts on iPhone and iPad

In the Vault, first open **Contacts → Mobile & app connections**, create a Contacts-only client password for the device, and copy it when displayed.

Then open **Settings → Apps → Contacts → Contacts Accounts → Add Account → Other → Add CardDAV Account** on current iOS and iPadOS versions.

- **Server:** `dav.lightdrive.one`
- **Username:** your full LightDrive email address
- **Password:** the Contacts-only client password created for this device

Keep SSL enabled. If discovery does not find the address book, use the complete path `https://dav.lightdrive.one/USERNAME/contacts/`. Your main Vault password, Vault app passwords, and Email-only passwords do not work for CardDAV.

Set LightDrive as the default contacts account if you want new contacts created on the device to be stored there automatically.
