

13.7 My Calendar Is Not Synchronizing

Open Calendar in the Vault to identify whether the missing change is on the server or only on one device.

1. Verify the URL `https://vault.lightdrive.one/remote.php/dav/`.
2. Use the full LightDrive email address and the correct account password or Vault app password.
3. Confirm the affected calendar is selected and synchronization is enabled.
4. Allow network access and background activity.
5. Check the device time zone when an event appears at the wrong hour.

Update the stored credential after a password change. Do not accept a certificate exception.
