

3.4 Regional Preferences

Regional preferences control how dates, times, language, and location-sensitive information appear in the Vault.

Open your account menu, select **Settings**, and open the regional or personal-information controls provided there. Set the language, locale, and time zone that match where you use LightDrive.

Why the time zone matters

Calendar events, account dates, activity entries, and scheduled notices use your configured time zone for display. If an event appears at the wrong hour, confirm both the Vault time zone and the time zone selected in the connected calendar app.

A regional setting changes presentation; it does not move or alter the underlying files, messages, or events.
